Ludzkie melanocyty, dorosłe

300694

INFORMACJE OGÓLNE

Opis

Human Melanocytes, adult are primary pigment-producing melanocytes isolated from adult human skin (epidermis). They are used to study melanogenesis, pigmentation disorders, UV/photobiology, and melanoma biology.

Chusteczka	Skin (epidermis)
Choroba	Normal

Zastosowania

Melanogenesis and pigmentation research; UV/photobiology; melanoma-related studies

KLASYFIKACJA

Organizm	Człowiek
Właściwości związane ze wzrostem	Zwolennik
Poziom bezpieczeństwa biologicznego	1

CECHY CHARAKTERYSTYCZNE

Morfologia	Dendritic / bipolar
Typ komórki	Melanocyte
Czas podwojenia	Approximately 48-72 hours

IDENTYFIKATORY

Źródło

Human Melanocytes, adult (Cytion catalog number 300694)

Numer identyfikacji podatkowej NCBI	9606

POSTĘPOWANIE I HODOWLA

Pożywka hodowlana

Melanocyte Growth Medium

Atmosfera inkubacyjna	37°C, 5% CO_2, humidified atmosphere.

Suplementy

Melanocyte growth supplements (e.g., bovine pituitary extract, growth factors); serum as per medium

Odczynnik dysocjacyjny	Trypsin-EDTA or Accutase

Hodowla komórek w subkulturze

At 70-80% confluence, wash with PBS, detach with Trypsin-EDTA or Accutase, neutralize, centrifuge at 300xg for 3 min, and reseed into fresh medium.

Współczynnik podziału	1:2 to 1:3
Gęstość wysiewu	2.5-5 x 10^3 cells/cm2
Odnawianie płynów	Every 2-3 days

Rozmrażanie i hodowla

Confirm that the vial remains deeply frozen upon delivery, as cells are shipped on dry ice to maintain optimal temperatures during transit.
Upon receipt, either store the cryovial immediately at temperatures below -150°C to ensure the preservation of cellular integrity, or proceed to step 3 if immediate culturing is required.
For immediate culturing, swiftly thaw the vial by immersing it in a 37°C water bath with clean water and an antimicrobial agent, agitating gently for 40-60 seconds until a small ice clump remains.
Perform all subsequent steps under sterile conditions in a flow hood, disinfecting the cryovial with 70% ethanol before opening.
Carefully open the disinfected vial and transfer the cell suspension into a 15 ml centrifuge tube containing 8 ml of room-temperature culture medium, mixing gently.
Centrifuge the mixture at 200 x g for 5 minutes, carefully discard the supernatant containing freezing medium.
Follow the procedure described under Post-Thaw Recovery

KONTROLA JAKOŚCI I KRIOKONSERWACJA

Pożywka do zamrażania	As a cryopreservation medium, we use complete growth medium + 10% DMSO for adequate post-thaw viability.

Warunki przechowywania

For long-term preservation, place vials in vapor-phase liquid nitrogen at about −150 to −196 °C. Storage at −80 °C is acceptable only as a short interim step before transfer to liquid nitrogen.

Warunki wysyłki

Cryopreserved cell lines are shipped on dry ice in validated, insulated packaging with sufficient refrigerant to maintain approximately −78 °C throughout transit. On receipt, inspect the container immediately and transfer vials without delay to appropriate storage.

KWESTIE PRAWNE I BEZPIECZEŃSTWO

Środki bezpieczeństwa

When planning to store a cryovial in liquid nitrogen for future thawing, it is mandatory to adhere to stringent safety measures. Appropriate protective gloves and clothing are essential, and the use of a face mask or safety goggles is required during the transfer of frozen samples to or from the liquid nitrogen tank. This is to mitigate the risk of injury from potential cryovial explosions upon removal, which can result in the projection of sharp fragments.

Gwarancja

At Cytion, we stand behind the quality and viability of our products.
We guarantee that our cells will be viable at the start of culture for
60 days after shipment from our facilities.
We assure that all materials conform to the specifications described in the
Certificate of Analysis and/or Product Sheet.
For full details, please refer to our
Warranty Statement.

Wymagana umowa o transferze materiałów	Yes
